

Solve

$$2x - y = -3.5$$

$$y + 4 = -\frac{1}{3}(x - 5)$$

Graph

$$2x - y = -3.5$$

$$y + 4 = -\frac{1}{3}(x - 5)$$

Apply

Phase 1: Bubs's Baloney Sammich truck travels at 15 mph for 4 hours.

Phase 2: Bubs stops for 7 hours to admire Large Bean.

Phase 3: Then runs back to his truck at 4 mph for 2 hours

y = {

Simplify each expression.

$$\frac{\sqrt{15}}{\sqrt{75}}$$

$$\frac{\sqrt{6x} + \sqrt{10}}{3\sqrt{20}}$$

$$\frac{\sqrt{8}}{7 - \sqrt{8}}$$

$$y = \sqrt[3]{x - 3} + 1$$
